Guest Lecture Series 2018

THE BIRDS OF MIDWAY

KIAH WALKER, BIOLOGICAL TECHNICIAN PARKER RIVER NATIONAL WILDLIFE REFUGE

Perched on the northern end of the Hawaiian archipelago, halfway between North America and Asia, Midway Atoll is one of the most remote locations in the National Wildlife Refuge System. Nearly three million birds nest on Midway, including the largest Laysan albatross population (including “Wisdom” shown below with her mate, at age 67 the oldest known breeding bird in the wild), one of the world’s rarest ducks, and a flock of rogue canaries.

Come hear about some of Midway’s most incredible wildlife from Kiah Walker, Parker River NWR Biological Technician, who spent six months as a biological volunteer on Midway. She will share never-before-seen photographs, stories about her experience, and knowledge about the conservation efforts on this unique National Wildlife Refuge.

***August 16, 2018, Thursday 7:00-8:30 p.m.
Parker River NWR Headquarters Visitor Center Auditorium
6 Plum Island Turnpike, Newburyport, MA 01950***

A Free Event Sponsored by Friends of PRNWR, Inc. & Parker River NWR
